Summarise Course/Methods

Siger

10 décembre 2018

Si Dieu est infini, alors je suis une partie de Dieu sinon je serai sa limite. . .

Table des matières

1 Introduction to Statistical Learning

—

1.1 Statistical Learning

—

1.1.1 What is statistical Learning ?

—

1.1.2 Assessing Model Accuracy

—

1.1.3 Introduction to R

—

1.1.4 Exercises

—

1.2 Linear Regression

—

1.2.1 Simple linear regression

—

1.2.2 Multiple linear regression

—

1.2.3 Other considerations in the regression model

—

1.2.4 The marketing plan

—

1.2.5 Comparison of linear regression with K-Nearest neighbors

—

1.2.6 Lab : linear regression

—

1.2.7 Exercises

—

1.3 Classification

—

1.3.1 An overview of classification

—

1.3.2 Why not linear regression ?

—

1.3.3 Logistic regression

—

1.3.4 Linear discriminant analysis

—

1.3.5 A comparison of classification methods

—

1.3.6 Lab : logistic regression LDA, QDA and KNN

—

1.3.7 Exercises

—

1.4 Resampling Methods

—

1.4.1 Cross-validation

—

1.4.2 The Bootstrap

—

1.4.3 lab : Cross-validation and the Bootsrap

—

1.4.4 Exercises

—

1.5 Linear model selection and regularization

—

1.5.1 Subset selection

—

1.5.2 Shrinkage methods

—

1.5.3 Dimension reduction methods

—

1.5.4 Consideration in high dimensions

—

1.5.5 Lab1 : subset selection methods

—

1.5.6 Lab2 : ridge regression and the Lasso

—

1.5.7 lab3 : PCR and PLS regression

—

1.5.8 Exercises

—

1.6 Moving beyond linearity

—

1.6.1 Polynomial Regression

—

1.6.2 Step functions

—

1.6.3 Basis functions

—

1.6.4 Regression splines

—

1.6.5 Smoothing splines

—

1.6.6 Local regression

—

1.6.7 Generalized additive models

—

1.6.8 lab : Non-linear modeling

—

1.6.9 Exercises

—

1.7 Tree-based-methods

—

1.7.1 The basics of decision trees

—

1.7.2 Bagging, RandomForest and Boosting

—

1.7.3 Lab : decision trees

—

1.7.4 Exercises

—

1.8 Support vector machines

—

1.8.1 Maximal margin classifier

—

1.8.2 Support vectors classifiers

—

1.8.3 Support vectors machines

—

1.8.4 SVMs with more than 2 classes

—

1.8.5 Relationship to logistic regression

—

1.8.6 lab : support vector machines

—

1.8.7 Exercises

—

1.9 Unsupervised learning

—

1.9.1 The challenge of unsupervised learning

—

1.9.2 Principal compoments analysis

—

1.9.3 Clustering methods

—

1.9.4 Lab1 : principal compoments analysis

—

1.9.5 Lab2 : clustering

—

1.9.6 Lab3 : NCI60 data example

—

1.9.7 Exercises

—
